

GF Partner Community

Deliver differentiation faster

Speed up time-to-revenue and reduce costs and risks leveraging the GF Partner Community

Leverage validated, best-in-class solutions from GF and more than 50 partners to differentiate hardware.

The development of today's complex integrated circuits (ICs) requires much more than advanced process technologies. State-of-the-art, comprehensive design enablement is crucial, from electronic design automation (EDA) software tools, design intellectual property (IP) and design services to mask services and assembly solutions.

GlobalFoundries® (GF®) provides specialty semiconductor solutions optimized to meet the unique demands of applications across automotive, mobility, computing, consumer IoT, industrial and wired connectivity markets and more. This portfolio is complemented by GF's ongoing focus on execution excellence and commitment to deep collaboration with customers and partners to deliver the end-to-end design enablement resources critical to bringing differentiated products to market faster, while minimizing risks and costs.

The GF Partner Community, comprising more than 50 partners, exemplifies seamless collaboration through offering solutions spanning critical IC design areas. GF's design enablement team validates GF Partner Community offerings with GF silicon solutions to ensure that they meet the highest standards so that customers can achieve first-time-right silicon.

 **Innovate with confidence:**

The GF Partner Community offers design enablement, IP, advanced assembly, mask and turnkey solutions that are validated on differentiated GF FinFET, FDX™, SOI, SiPh, SiGe and CMOS platforms to help partners avoid design pitfalls and deliver hardware that sets them apart from their competitors.

 **Optimize product design for growth market:**

GF Partner Community provides access to application-aligned assets from GF and 50+ partners to help designers get first-time-right results. The GF Partner Community also includes specialized FDX Network and RF Networks that ease the move to FDX platforms and simplify RF design, respectively.

**Fast-track ROI:**

The GF Partner Community nurtures synergy and collaboration between partners and GF, which reduces design and development barriers so that partners can accelerate time to market, volume and revenue, while gaining market visibility, exposure and penetration.

**Get a head start on the competition:**

GF's expert design enablement team validates partners' services and solutions with proven GF silicon process technologies so designers can reduce development time with confidence that the highest standards have been met, while partners can take advantage of GF's technical expertise and get early insights into GF solution roadmaps.

GF Partner Community

GF's comprehensive ecosystem, composed of all GF partners.

FDX Network

The GF ecosystem for building innovative 22FDX-based products

RF Network

The GF ecosystem for building highly optimized RF products
